SWEDEN

High efficiency fume extractor with electrical outlet for the direct connection of power tools.

## AirAware – the easy-to-use fume extractor

*Today, more and more people are spending their free time enjoying creative hobbies. Whether you build model planes, work with electronics or metal work, silver or glass, your hobby may expose you to fumes and vapors that may be harmful to your health.*

AirAware is a small fume extractor that can be placed near your work area so that smoke, gas and fumes are automatically suctioned away when you solder, cut, weld, glue, paint or lacquer your projects. Many of the harmful fumes you breathe are invisible and odor free. AirAware lets you breathe fresh air and you no longer risk suffering from headaches, nosebleeds, fatigue or dizziness.

### **An important part of your safety equipment**

AirAware is easy to use. There is no need for an exhaust. Smoke, gasses and fumes are dispersed to other parts of the room and exit through the building's ventilation. AirAware comes with an electrical outlet so that you can plug your soldering iron or other electric power tools into the fume extractor. This helps to increase safety since you won't forget to turn the tool and the fume extractor on/off.

Just like protective goggles and gloves, AirAware is an important part of your safety equipment.

### FACTS AIRAWARE

Measurements (L x W x H):	185 x 85 x 160 mm 7.3 x 3.3 x 6.3 in
Weight:	0.7 kg/ 1.54 lb
Suction power:	46 m <sup>3</sup> /h
Rotation:	2,350/2,850 rpm
Power:	14.5 W
Voltage:	230 V / 50 Hz
Noise level:	23 dB
Idea & design:	Eva Anundi
